

Master Prompt — Team Build Playbook

Master Prompt — Team Build Playbook

Action item: every role builds their Master Prompt this week.

Why we're doing this

Every time you start a new chat with ChatGPT, Claude, Manus, or any AI tool, the model has zero context about who you are, what your role is, what we're building, or what we've decided. You spend 30+ seconds re-explaining yourself on every prompt — multiplied across hundreds of prompts a week. A Master Prompt is a one-time document that captures all of that. Drop it into any tool. The AI now operates like a senior consultant who has worked with us for years. This is the highest-leverage 45-minute setup we'll do this quarter.

Build your MP this week (45-minute setup)

1. **Open ChatGPT (or Claude — whichever you use most).** Voice mode preferred. Don't type if you can avoid it.
2. **Paste this prompt verbatim:**

I'm the [role] at [company name]. We do [one-line description of what the company does]. Here's our revenue tier: [stage]. Here's our customer base: [who]. Here's how we monetize: [model]. Here's all the details about me. Create a master prompt for my role. Ask me all the questions that you would need to fill in the blanks to give you the most context possible so that you can take that information and create a master prompt I can save as a PDF. Go.

3. **Answer every question it asks.** Voice-dictate where possible. Don't overthink — first instinct is usually right. Expect 20-45 minutes of back-and-forth.
4. **At the end, type:** *"generate the master prompt as a downloadable PDF."*
5. **Save the PDF to** [shared drive folder]/master-prompts/[your-name]-[role]-mp-2026-05-04.pdf

What the MP should cover (the 9 categories)

#	Category	What goes here
1	Company context	What we do, revenue stage, customer base, monetization
2	Your role	Title, scope, what you own, what you don't
3	Perspectives	How you think about the work (your operating beliefs)
4	Use cases	What you'll typically use AI for in your role
5	Core values	Personal + company
6	Team / staff	Who reports to you, who you report to, key collaborators
7	Preferences & constraints	What you like, won't do, have to work around
8	Vision	Where you're going (3-year, 1-year, current quarter rocks)
9	Impact	What you're trying to achieve in the world

Deploy it (do all four)

After your PDF is saved, load it into every AI tool you use:

- ☐ **ChatGPT — Custom Instructions** (Settings → Personalization → Custom Instructions). Paste the MP text. Now every chat starts with your context loaded.
- ☐ **ChatGPT — Projects.** Create a Project for your main work area. Upload the MP as a knowledge file. Use this Project for ongoing work.
- ☐ **Claude — Project knowledge.** Same pattern; upload the MP PDF as project context.
- ☐ **Manus AI** (if you use it). Set the MP as your operating context for any agent task.

Maintenance cadence

- **Weekly review** (5 min, end of week): does anything in your MP need updating? Quarterly rocks shifted? Team changed? Team additions get added; departures get removed.

- **Tie it to your existing weekly leadership sync.** If you don't have one, tie it to your Friday wrap.
- **Monthly:** ask your AI tool: *"Based on what I've worked on this month, what should I update in my master prompt?"* Let it suggest the diff.

What to expect by end of month

If this is working:

- ☒ You stop re-explaining yourself in every new chat.
- ☒ AI responses feel role-specific — they reference your team members by name, your revenue stage, your current rocks.
- ☒ You're using AI for harder tasks (strategic decisions, hire/fire reasoning, content briefs) that you'd previously have done unaided.
- ☒ At least one Custom GPT created from a system prompt you extracted ("write me the system prompt that would have generated this output").

If this is NOT working — i.e., you set up the MP but AI responses still feel generic — most likely cause: you set the MP up but didn't actually load it into the tools. Check the deploy checklist above.

Did you do it?

Check off each step:

- ☐ I built my Master Prompt via voice dictation
- ☐ I saved the PDF to the shared drive
- ☐ I loaded it into ChatGPT Custom Instructions
- ☐ I loaded it into a ChatGPT Project
- ☐ I loaded it into Claude Project context
- ☐ I loaded it into Manus (if applicable)
- ☐ I scheduled my weekly 5-min MP review

If you want the full background

Watch the canonical Dan Martell YouTube on this: ["How to Get Ahead of 99% of People \(with AI\)"](#) (21 min).

The Master Prompt is hack #2 of 7. The other six are also worth your time, but the MP is the foundational one — everything else compounds with it.

Questions? DM me. Once you've built yours, post a confirmation in #ai-tools so the team knows where you are.
